WORK EXPERIENCE

fal (Features and Labels, Inc.)

San Francisco, USA (Remote)

SOFTWARE ENGINEER, INFRASTRUCTURE

11/2025 - Present

- Core engineer on fal's serverless GPU inference platform—an industry-leading generative-AI infrastructure provider used by AI teams to deploy and scale models without managing infrastructure (docs.fal.ai/documentation/serverless).
- Designed and shipped the runner lifecycle system—graceful termination, runner status visibility, and health checks—directly impacting platform reliability for production AI workloads.
- Operate a multi-cloud GPU fleet across multiple providers, running Nomad clusters alongside bare-metal nodes with custom network overlays.
- Delivered platform features end-to-end, including model status pages and CDN access control.

DATA ENGINEER, RESEARCH

01/2025 - 10/2025

- Co-led, on a two-person team, the pre-training of a 22B-parameter text-to-video foundation model from scratch with no initial data or parameters (published as *Summer-22B*, [arXiv:2603.00173](https://arxiv.org/abs/2603.00173)).
- Owned the data pillar end-to-end: large-scale clip collection, deduplication, multi-stage quality filtering, and metadata-driven curation across 50M clips.
- Designed and released the open-source *Lavender Data* platform that underpinned the project (github.com/fal-ai/lavender-data).

Corca, Inc.

Seoul, Korea

DEVELOPMENT LEAD (10–15 PERSON TEAM)

12/2022 - 12/2024

- Led the engineering organization in a critical capacity: owned architecture, DevOps, team management, hiring, and development-process design.
- Built a retail-media solution—a personalized recommendation system—from architecture to production rollout.

FOUNDING ENGINEER (5–10 PERSON TEAM)

07/2021 - 12/2022

- One of the first engineering hires; built the real-time online-advertising bidding system that became the company's core product.
- Designed data collection and processing pipelines, ML-model deployment, and continuous-training infrastructure.
- Sustained 300k requests per minute in production.
- Stack: AWS, Pulumi, Kafka, Nest.js, Go, gRPC, Redis.

Pangea, Inc.

Seoul, Korea

BACKEND DEVELOPER (3-6 PERSON TEAM)

10/2021 - 12/2021

- Built a NFT marketplace based on K-Pop idol contents 'Moment of Artist'.
- Served over 15K users at the peak time.
- AWS ECS, MongoDB, CloudFlare, Next.js, Nest.js

Mars Green

Seoul, Korea

BLOCKCHAIN DEVELOPER (2 PERSON TEAM)

07/2021 - 09/2021

- Built smart contracts and web backend for the Ethereum-based NFT gallery 'Mars Green' (<https://marsgreen.co>).
- Stack: AWS ECS, Solidity, express.js, ethers.js.

CodeWings, Inc.

Seoul, Korea

WEB FULL STACK DEVELOPER (2 PERSON TEAM)

12/2020 - 07/2021

- Built and maintained the algorithm education platform web service.
- Course and student management, online exams and assignments for lectures and students.
- Provided remote code executions for exams and assignments.
- AWS EC2, ECS, Docker, Django, Next.js, redux, gRPC, socket.io

PUBLICATIONS

Summer-22B: A Systematic Approach to Dataset Engineering and Training at Scale for Video Foundation Model

[arXiv:2603.00173](https://arxiv.org/abs/2603.00173) | arxiv.org/abs/2603.00173

SIMO RYU, CHUNG HWAN HAN

2026

- Co-authored research paper on the design and pre-training of a 22B-parameter text-to-video foundation model trained from scratch on approximately 50M clips.
- Led the data side end-to-end: collection, deduplication, filtering, and a metadata-driven curation pipeline; co-designed and released the open-source *Lavender Data* system that underpinned the work.
- Applied μ P hyperparameter transfer and hypersphere-constrained optimization for stable scaling.
- Released alongside open-source data pipeline infrastructure (github.com/fal-ai/lavender-data).

HONORS & AWARDS

2020 **6th Place**, CODEGATE 2020 CTF Finals — Korea's flagship international security competition

Online (Seoul)

OPEN-SOURCE & SELECTED PROJECTS

fal-ai/fal

github.com/fal-ai/fal

FAL SDK — PYTHON SDK FOR FAL'S SERVERLESS GPU INFERENCE PLATFORM

2025–2026

- Core maintainer across the SDK, CLI, and runtime
- Shipped various platform features: graceful-shutdown lifecycle, health-check config, secrets/data-mounts deployment, CDN ACL handling, and more.

fal-ai/lavender-data

github.com/fal-ai/lavender-data

LAVENDER DATA — TRAINING-DATA PLATFORM FOR GENERATIVE MEDIA MODELS

2025

- Designed and led the open-source release of the data-curation platform used to train the Summer-22B video foundation model.
- Metadata-driven dataset curation, multi-stage filtering, and reproducible data pipelines for large-scale model training.

soulcert

github.com/soulcert/soulcert

SBT-BASED CERTIFICATION SYSTEM

06/2023

- Blockchain certification system using non-transferable NFTs (Soul-Bound Tokens).
- Stack: Solidity, Hardhat, NestJS, Next.js, Polygon testnet, AWS ECS.

nestjs-slack-listener

github.com/hanchchch/nestjs-slack-listener

NEST.JS MODULE FOR BUILDING SLACK APPLICATIONS

03/2022

- Decorators for building Slack applications in idiomatic Nest.js style.

NOTABLE UPSTREAM CONTRIBUTIONS

- `pytorch/pytorch` (PR #162717, #163835) (100k stars) — improved `torch.nn.utils.parametrize` error handling and module exposure.
- `traceloop/openllmetry` (PR #764) (7.1k stars) — added OpenTelemetry metrics support for Anthropic models.
- `yusufcanb/tlm` (PR #18) (1.5k stars) — added command suggestion output refinement.

SERVICE TO THE FIELD

DevKor, Korea University Software Development Society

Seoul, Korea

EXECUTIVE MEMBER & HACKATHON ORGANIZER

02/2021 - 02/2022

- Organized and judged a university-wide hackathon for student engineers, sponsored by six companies including AWS and Naver D2; evaluated competing teams' submissions.
- Lectured on web backend engineering to multidisciplinary undergraduate cohorts.
- Built and operated the platform that hosted the event.

CyKor, Korea University Cyber Security Society

Seoul, Korea

EXECUTIVE MEMBER & CTF ORGANIZER/JUDGE

09/2019 - 12/2020

- Organized a national Capture-the-Flag competition with over 100 competitors; designed and judged challenges as a member of CyKor.
- Built and operated the competition platform—tens of containerized challenges across three on-premise Linux servers.
- Lectured on web security and offensive techniques to undergraduate cybersecurity students.
- Competed under team CyKor at top international CTFs including DEFCON, CODEGATE, and zer0pts.

Contract Research Project, Korea University Dept. of Cyber Security

Seoul, Korea

PENETRATION TESTER

12/2020 - 07/2021

- Contract research project assigned to the Korea University Department of Cyber Security.
- Identified and reported multiple production vulnerabilities (stored XSS, information disclosure, open redirect, and others) in the web services of one of Korea's largest software companies.

EDUCATION

Korea University

Seoul, Korea

BSC IN INFORMATION SECURITY

03/2019 - 08/2023

- Studied Software Engineering, Security, Network and Cloud Computing
- 4.07 GPA

Technical University of Munich

Munich, Germany

STUDENT EXCHANGE

04/2022 - 09/2022

- Studied Cloud Computing, Distributed System and Peer-to-Peer Network
